

POPs Declaration

Persistent Organic Pollutants (POPs)

February 2025
Revision - 1

Introduction:

Circad Design Limited specializes in the design and manufacture of electronics' assemblies across all industries. We are committed to regulatory compliance, environmental responsibility, and transparency regarding the presence of Persistent Organic Pollutants (POPs) in our products.

Supplier Information & Limitations:

We source components from multiple suppliers and actively request POPs compliance statements to assess material composition. However, due to the complexity of global supply chains and proprietary manufacturing processes, we rely on supplier declarations and cannot independently verify the complete absence of POPs in all supplied materials.

POPs Content in Our Products:

Based on available supplier data:

- The PCBA products and components supplied do not intentionally contain any substances listed under the Stockholm Convention as Persistent Organic Pollutants.
- No brominated or chlorinated flame retardants regulated as POPs have been knowingly used in the manufacturing process.
- Our manufacturing processes do not generate or release Persistent Organic Pollutants.
- Where supplier declarations are unavailable, we cannot fully guarantee the absence of POPs.

Compliance & Ongoing Efforts:

- We engage with suppliers to request material composition disclosures, including POPs content.
- We monitor and comply with global regulations.
- Where feasible, we explore alternative solutions to reduce restricted substances.
- Supplier POPs declarations are available upon request, if provided to us.

Disclaimer:

This declaration is based on reasonable due diligence and supplier-provided data. It does not constitute a legally binding guarantee regarding POPs content. Customers with specific POPs restrictions should contact us for further discussions or engage directly with component manufacturers for the most accurate and up-to-date material disclosures.
